

Making the Right Choice

If you are not using Microsoft Dynamics GP's SOP-POP link/sales fulfillment workflow feature and you are looking for a solution to help you automate the fulfillment of your partially fulfilled sales orders, you have come to the right place. Binary Stream is dedicated to enhancing standard Microsoft Dynamics GP functionality with products like the SOP Auto-Fulfillment™ solution. This product offers you an alternative to fulfill your partially fulfilled sales orders within the SOP module.

Flexible & Convenient

Not all sales orders can be completely fulfilled at the time of processing due to missing or out of stock items. As a result, you would have to create purchase orders and wait for the items to arrive. Once you replenish your inventory, the SOP Auto-Fulfillment tool enables you to mass fulfill your outstanding sales orders using user defined selection criteria or by predefined priority levels that are assigned to sales order types. In other words, at a click of mouse button, our solution can seek out all outstanding sales orders and fulfill them with replenished items based on a priority level that you setup initially. Moreover, as sales orders are fulfilled, new picking tickets can be printed for immediate packing and shipping. If you encounter out of stock situations frequently and have trouble prioritizing which sales orders to fulfill once you replenish your inventory, the SOP Auto-Fulfillment tool will help you streamline this process and keep your customers happy.

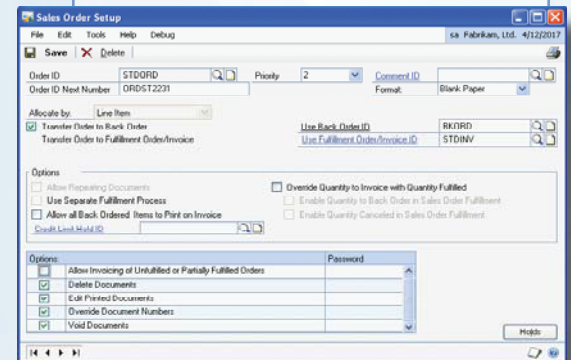

Seamless Integration

Like most of our products, SOP Auto-Fulfillment was developed using Dexterity, the native programming language for Microsoft Dynamics GP. This means you are integrated to Microsoft Dynamics GP in the best possible way, keeping data in one central location. Data imports or synchronization is eliminated, user training is minimized, and you can easily create reports on data that is in our product. You won't be able to tell if SOP Auto-Fulfillment was a separate product.

Features

- Efficiently fulfill partial sales orders in a priority sequence
- Specify fulfillment priorities by Order ID
- Restrict fulfillment by Sites
- Fulfill multiple orders at a time
- Transfer orders from one batch to another

Control your unfulfilled orders effectively & with your document priorities in mind

Customer Quote - "With Binary Stream's help, we were able to streamline our entire billing process and reduce invoice processing times from 4 – 5 days a month to less than an hour. When choosing the right partner to work with, Binary Stream's history of development experience guarantees that their services will always exceed expectations."
