

## Peer 1 Challenges their Document Delivery Efficiency

*"With Binary Stream's help, we were able to streamline our entire billing process and reduce invoice processing times from 4 – 5 days a month to less than an hour. When choosing the right partner to work with, Binary Stream's history of development experience guarantees that their customization services will always exceed expectations."*

*~ Mark DeMello,  
PEER 1*

PEER1 is a premier Internet infrastructure provider that delivers leading-edge server co-location, network and dedicated hosting to web-centric businesses worldwide. Regarded as the first network to offer a 100% uptime guarantee, the company's dedication to innovation, high performance and true customer care, has allowed them to become the most respected Internet infrastructure provider in the world.

PEER1's headquarters are located in Vancouver with 12 state-of-the-art data centers and 17 points of presence across North America, all connected by PEER1's world class Internet network. PEER1 continues to serve customers who range from gaming to VoIP, to enterprise.

**A**s a global leader in providing Internet infrastructure solutions, PEER1's growing customer base prompted the need for robust financial management solution. When PEER1 selected and implemented Microsoft Dynamics™ GP (formerly Great Plains), their internal billing process still lacked the ability to efficiently mass send and

batch process electronic invoices to their large and dispersed customer base. Microsoft Dynamics GP's functionality was limiting PEER1's accounting department's ability efficiently process customer invoices. As a result, the need for a document delivery solution that offered seamless integration to Microsoft Dynamics GP's SOP module was born.

### Success with the eMailer Manager

Developed as a cost effective document delivery solution, the eMailer Manager has allowed PEER1 to significantly reduce invoice delivery times from 5 days to less than an hour. Its seamless integration and easy-to-

use interface with Microsoft Dynamics GP has allowed PEER1 to mass deliver an unlimited amount of invoices to an unlimited number of customers every billing cycle.

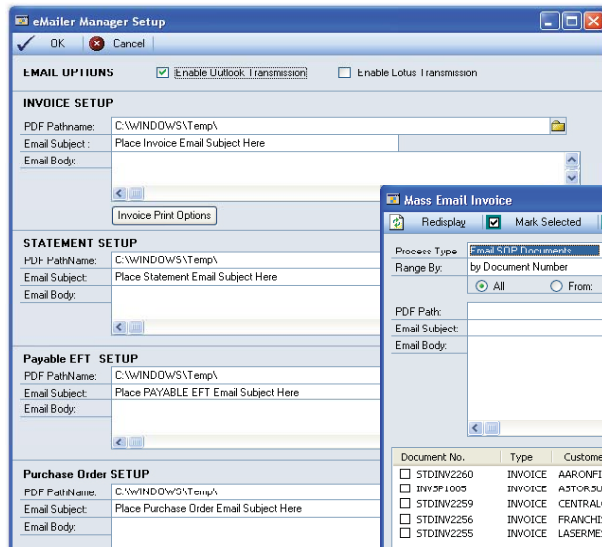

## Working Smarter

*"After a software customization project for us had gone off the rails in a lengthy bungled manner, with a few computer consulting firms contributing to the wreck, it was Binary Stream Software who finally rescued the project. Their people are a joy to deal with, and we were able to realize the benefits that were promised to us so long ago. We wish we had found them first."*

*~ Ron D. McTaggart,  
Connors Drilling Ltd.*

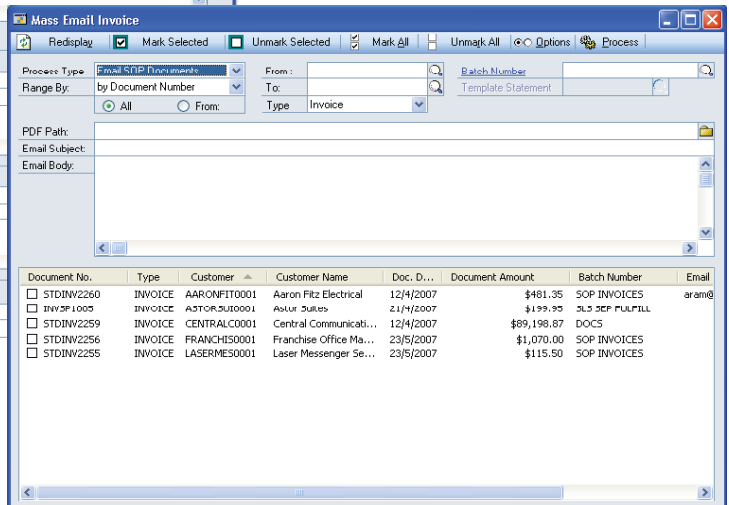

Developed using Dexterity, the eMailer Manager offers PEER1 a stable and reliable document delivery solution. All of the data used by the eMailer Manager resides in the same database as Microsoft Dynamics GP to minimize the hassles of managing multiple databases. By using the "batching" functionality in the eMailer Manager, PEER1's Accounts Receivables staff are able to keep track of which

SOP documents were emailed so that particular batch can be posted. Whether it's used to deliver SOP documents, EFT Payables remittances, statements, or purchase orders, the eMailer Manager provides an effective means for PEER1 to communicate with their customers with speed and effectiveness. "The solution has been very responsive to our needs and is a great asset for us," says DeMello.

**Manage** which emailing engine to use and setup default messages

**Streamline** SOP document delivery

**Binary Stream Software Inc.**
