

Solution Summary

As a leading Gold Certified Microsoft ISV partner and a member of Microsoft's prestigious President's Club, Binary Stream Software specializes in enterprise products for Microsoft Dynamics GP. With over a decade of experience in Microsoft Dynamics GP, we are committed to providing our partners and customers with innovative and comprehensive products that are proven to fit client needs out-of-the-box.

Currently offering you 17 out-of-the-box products for various industries including Healthcare, Financial Services, Distribution, Manufacturing, Real Estate, Professional Services and Telecommunications, we strive to provide best-of-breed products for a variety of organizational situations. All of our products are developed with Dexterity, the native programming language of Microsoft Dynamics GP, which provides you with greater reporting flexibility and direct product integration. Categorized into three product series based on complexity and scope, our products range from very simple utilities to comprehensive enterprise solution suites. If you have any questions about our products please feel free to contact us anytime.

Enterprise Series

The Enterprise Solution Series from Binary Stream represents the larger, more complex products that we offer. Fit for both small and large organizations, these solutions cover a larger portion of the sales cycle and require a deeper look into the end-users' work flow and requirements. While some of these products are vertically focused, they are all seamlessly integrated into Microsoft Dynamics GP and offer end-users a more complete solution offering than our other solutions series.

Multi-Facility Processing

Multi-Facility Processing is the true multi-company/centralized processing solution for Microsoft Dynamics GP that facilitates multi-entity accounting from just one database. By sharing various master records such as items, vendors and customers across different corporate entities, locations, or structures all in one database significantly improves financial reporting while at the same time maintaining structural divisions and visibility/posting permissions for users similar to a multi-database setup.

Property Site Manager

The Property Site Manager is a flexible and robust property management solution built for non-residential (commercial, retail, industrial, etc.) and residential property managers. This Dexterity based solution offers property managers tight control over property expenses and maintenance costs allowing them to maximize their revenues and occupancy levels.

Materials Management

Materials Management for Healthcare providers offers users complete supply chain management capabilities that allow for dramatic reduction of inventory related costs. The streamlined and automated inventory management processes ensure accurate levels of inventory, requisitions routing, approvals, purchase order transmissions and patient cost tracking.

Investment Manager

The Investment Manager was developed for any company (i.e. private equity firms, start-ups, cooperatives, mortgage companies) that issues equity as investment vehicles for investors and that needs to distribute dividends. Users can easily coordinate, monitor, and manage investments, distributions, and pay commissions to brokers or sales agents.

Revenue&Expense Deferrals

Revenue&Expense Deferrals offers organizations in-depth control and flexibility to manage deferrals for both revenues and expenses. Best suited for service based organizations who desire to delay their recognitions throughout the life of a project or contract, this software allows its users to defer on a line item basis within Microsoft Dynamics GP's SOP and POP transactions. This product is well suited for Professional Services companies.

Manager Series

Binary Stream's Manager Series Solutions are fully-functional out-of-the-box products geared to enhance the standard functionality of Microsoft Dynamics GP. Built in Dexterity, these products encompass more robust features that allow businesses to increase their operational efficiency and effectiveness around specific business processes.

eMailer Manager

The eMailer Manager batch processes and mass emails, faxes, or EDIs SOP documents (invoices, statements, orders, quotes, returns, payroll remittances) EFT remittance reports, and purchase orders via Lotus Notes or Outlook using Adobe PDF.

Property Manager Light

Property Manager Light offers real estate managers the essential tools to track, manage, and invoice tenants. It is a great fit for property managers that just want to focus on tenant billing.

Sales Document Merger Manager

The Sales Document Merger Manager streamlines sales order processing and increases customer responsiveness by merging/consolidating any sales document such as invoices by user defined criteria.

National Accounts for Payables Manager

National Accounts for Payables Manager allows users to use national accounts functionality within the payables module to set-up and manage parent and child vendor relationships. It is great for companies dealing with many vendors.

Serial Lot Copy&Paste Manager

The Serial Lot Copy&Paste Manager enables users to efficiently 'copy and paste' serial or lot numbers into the SOP, POP, Inventory, and RMA modules, saving valuable inventory processing time while enforcing standard business logic.

Vendor Contract Pricing & Rebates

Vendor Contract Pricing & Rebates enables users to maintain specific vendor contract pricing, calculate rebates on a transaction basis, and process rebates seamlessly with vendors through both SOP and POP modules.

EFT Manager

The EFT Manager enables EFT banking with Canadian and UK financial institutions such as HSBC, Laurentian Bank, Scotiabank and more. CPA 005, HSBC Net and BACS formats are supported within this product.

Sales Document Splitting Manager

The Sales Document Splitting Manager improves sales order processing efficiency by splitting sales documents such as invoices by criteria driven by your customers. Instead of re-creating multiple invoices for one customer, invoices can be split into many.

Inventory Dimensions

Inventory Dimensions allows users to track up to ten additional user defined dimensions for each inventory item to create a comprehensive inventory matrix. This product is perfect for companies with inventory in rolls and sheets.

Lease/Loans Manager

The Lease Manager adds a significant amount of functionality to the Scheduled Payments feature in Receivables Management including the Rule of 78 interest calculation, ability to calculate and collect taxes from customers, enhanced payment status reports, extended amortization inquiries, and the ability to streamline transaction posting.

SOP Auto Fulfillment

SOP Auto Fulfillment allows Microsoft Dynamics GP users who do not use the SOP-to-POP link to automatically fulfill partial sales orders by linking these sales to the relevant purchase orders based on a sales order priority set by the user.

Foundation Series

Foundation Series products are shaped individually for your needs and time after time are seen to work better than out of the box solutions for the functional areas they serve. For far less money than most comparable products on the market today, our Foundation Series of solutions provide much greater value for the price you pay.

Recurring Billing Manager

The Recurring Billing Manager automates the recurring billing process by setting-up billing schedules for the automatic delivery of SOP invoices.

InterCompany Inventory Manager

The InterCompany Inventory Manager allows users to view inventory levels from multiple sites on the same GP screen.

Internal Sales Distribution Manager

The Internal Sales Distribution Manager tracks and monitors internal sales distributions for organizations with multiple locations or sites that process intercompany transactions.

Batch Transfer Manager

The Batch Transfer Manager transfers one or many transactions from existing batches into new batches to streamline transaction processing.
