Overview

Binary Stream is the leading source of out-of-the-box products for Microsoft Dynamics GP and has been offering innovative industry specific products to customers all over the world for almost a decade. With well over 400 customers, many of them fall within the Healthcare industry. As Microsoft continues to invest heavily into the healthcare vertical market, Binary Stream will continue to be an innovator for Microsoft Dynamics GP based healthcare solutions. Currently, Binary Stream offers a comprehensive supply chain management solution that is seamlessly integrated into Microsoft Dynamics GP's core modules. From the GL module to Inventory Control, Healthcare Materials Management is a best-of-breed application that was developed using the latest Microsoft technologies and industry-insider knowledge.

Healthcare

for Microsoft Dynamics GP

Healthcare Materials Management

SUPPLY CHAIN MANAGEMENT.

Binary Stream's Healthcare Materials Management solution was developed specifically for hospitals that utilize Microsoft Dynamics GP. While Microsoft Dynamics GP provides a powerful back-office system, Healthcare Materials Management offers complete supply chain management capabilities for healthcare organizations. Procurement related costs can be dramatically reduced through streamlined and automated inventory management processes that ensure accurate levels of inventory, requisitions routing, approvals, and purchase orders transmissions. The receiving and delivery of goods is managed through the latest technology in data collection devices so that the right materials are available when and where they are needed. Inventory control procedures are enhanced for materials management staff to have better control and foresight into the movement of the inventory. With Binary Stream's Healthcare Materials Management software, patient charges are also streamlined through the use of sophisticated inventory tracking measures. Healthcare Materials Management will work with either Microsoft Dynamics GP Professional or Standard and "cut-down" versions will also be available for smaller organizations such as clinics.

Multi-Facility Processing

CONSOLIDATE MULTI-ENTITY DATA.

Multi-Facility Processing provides multi-entity data consolidation and accounting centralization for organizations with multiple locations/sites/facilities. Although this is a cross industry application, healthcare organizations such as long-term care facilities and clinics can particularly benefit from this application. Essentially, this solution was tailored for organizations that want to consolidate and centralize their enterprise data and not have to manage multiple databases or silos of information. While being able to segregate financial data by entity and by operating from a single company database, organizations can save operational costs related to transaction processing and can minimize transaction entry error, as well as streamlining financial reporting. Instead of creating multiple companies in Microsoft Dynamics GP for each location/site/facility due to user security concerns, this solution allows multiple companies or locations to share Item, Vendor, and Customer Master records all in one single company database while maintaining strict user security to limit one user from accessing another location's data.
